EDUCATION

McMaster University, Hamilton *2021 - present*
B.S. in Mathematics & Statistics
Relevant coursework: Mathematical Scientific computation, Probability, Ordinary differential equations, Statistical Inference, Introduction to modelling, Applied linear regression with SAS.

PROJECTS

Python September 2022

· Created plots using pyplot.
· Computed matrix operations using 2×2 for loop and lists.
· Computed the Reimann sums using functions, for loops and while loops.
· Computed Cayley tables using for loops and functions.
· Computed Buffon's needle to show that Buffon's needle estimates π when the sample size approaches infinity.

C++ May 2019

· Programmed a calculator in C++.
· Rock paper and scissors game.
· Computed the fibonacci sequence.

R September 2024

· Used dimensionality reduction techniques such as PCA and FA in exploratory data analysis.
· Used Supervised learning methods such as k-nearest neighbours, classfication trees and random forests to explain data
· Used Logistics regression to obtain the odd ratio to interpret data.

Research Paper July 2024 - August 2024

· Third author in Computational Measures of Gaze Behavior Using the Concept of Situational Awareness with instructor: Qing Xu.
· Read various documentations in the field of partial information decomposition to give feedback and corrections.
· Helped typeset the LaTeXdocument.

SKILLS

Technical skills: Microsoft Office, SAS, MATLAB, Git

Computational Languages: Python, Elementary C++, R, and LaTeX

Linguistic Languages: Fluent in English and Mandarin.
